

of said surface of said cutting die support cylinder, said working device being a dynamic fluid cylinder, said head of said bolt being secured to said cutting die when in said extended position.

12. The apparatus of Claim 11, said bolt having a shank affixed to said working device, said head in having a larger area than an area of a cross-section of said shank in parallel relation to said head.

13. The apparatus of Claim 11, said dynamic fluid cylinder being a pneumatic cylinder.

14. The apparatus of Claim 11, said dynamic fluid cylinder being a hydraulic cylinder.

15. The apparatus of Claim 11, said cutting die support cylinder having quincunxes formed on a surface thereof, said head of said bolt positioned in one of said quincunxes in said retracted position.

16. The apparatus of Claim 11, said cutting die support cylinder having a plurality of threaded holes formed thereon, said cutting die having respective fasteners received by said plurality of threaded holes so as to secure said cutting die to said cutting die support cylinder.

17. The apparatus of Claim 16, said plurality of threaded holes having respective quincunxes formed at said surface of said cutting die support cylinder.

18. The apparatus of Claim 11, said working device having springs, cooperative with said bolt such that said bolt remains in said retracted position when said bolt is obstructed from moving to the extended position.

19. The apparatus of Claim 11, said cutting die being centered on said cutting die support cylinder.

20. The apparatus of Claim 19, said cutting die support cylinder having a circumferential butt and an axial butt, said cutting die having an edge abutting said circumferential butt and a
